# XSoft Rapid Report Generator™

XSoft software has always interacted with a variety of electronic documents, such as associating a scanned PDF document (e.g. property record card) with a specific property record. We have recently expanded this interaction via a new module named **XSoft Rapid Report Generator**™, which automates the mass production, printing, and exporting of a variety of reports, simplifying this tedious and typically manual process.

On Demand Printing and Exporting for:

- Tax bills
- Forms and notices (e.g. Form 11)
- Property Record Cards (PRCs)
- **Any** report by user-defined query

Benefits:

- Batch print or PDF export <u>any</u> report within the system, including tax bills, PRCs, notices, etc. via user-defined query with user-defined file naming.
- File names are automatically created based on user-defined parameters (State PIN, Local PIN, Owner Name, etc.).
- File creation is fast, creating thousands of electronic documents per hour.
- Predetermine the way documents are created and sorted (alphabetically by name, numerically by PIN, etc.).
